

"There is a change from security being viewed as a nuisance to being viewed as an enabler. Those companies that do security well will be the organizations people choose to do business with"

Learn About Us

Our vision is to establish ourselves as the most trusted Governance Risk and Compliance solutions and services provider to customers from government, financial, insurance, telecommunications and enterprise markets throughout Southeast Europe and Middle East.

We are dedicated to the delivery of security solutions and services of exceptional quality, design and value that enable our customers to mitigate and manage security risks that threaten their competitive advantage or market position.

We believe that Information Security is not a business inhibitor, it is a business enabler. Many organizations believe that information security is primarily to protect against threats, not to help facilitate business and stimulate growth.

At BESECURE, we believe that security requires a comprehensive approach. Partial solutions give only partial protection. A comprehensive security solution must address the three elements that together determine the security of an organization: systems, processes and people.

Our Enterprise Security Services and Solutions are an integral part of our Security Life Cycle Framework that allows us to advise clients of any scale national or global, in a structured and consistent approach, which results, in better decision-making to plan, deploy, manage and maintain ICT infrastructures.

Why Us

Having worked on numerous projects, we have gained unmatched business and technological expertise. We have built a large database of knowledge that we apply to deliver solutions that meet customers' needs, expectations and budget.

While retaining competitive rates we never compromise the quality of our services. A dedicated quality assurance department monitors project activities at all delivery phases and guarantees high quality.

We hire and retain only the best professionals. At BESECURE we have set up a thorough personnel selection process and a challenging environment to grow and improve our large resource pool of subject matter experts.
